

# Special Offer – Initiate your Cloud Governance

- AWS
- Governance
- Security
- Cost Mgt

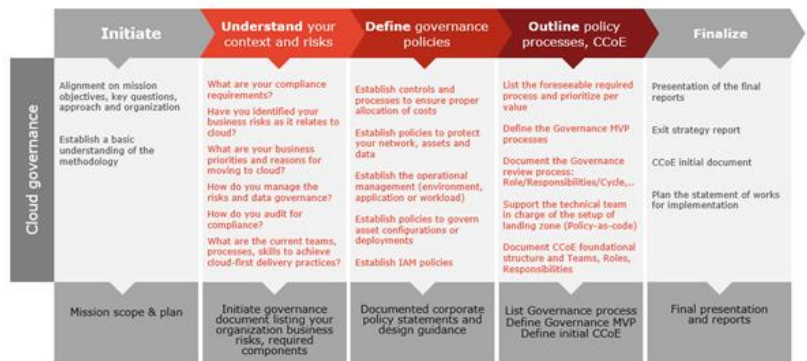

## Cloud Governance framework

Governance is important for maintaining full compliance, creating better cost visibility and control, improving security posture and being agile to support scale.

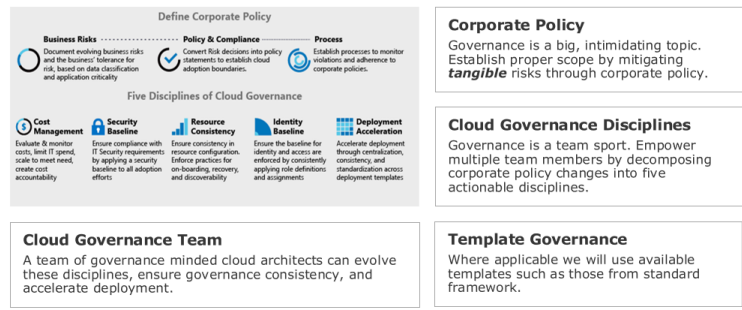

Following Cloud well Architected principles, we will initiate within your organization the foundational mission scope for defining an actionable Cloud governance with its related process and policies.

## Approach – Cloud Governance & Risk

## Governance discipline

Following well know standard Cloud Adoption Framework, we will support you in defining your initial governance foundation which consists of a small, easily implemented set of governance tools.

## OBJECTIVES

Your organization has defined its Cloud strategy and wants to move forward by implementing it. You need now to explicitly define its usage before it becomes unmanageable.

The mission outcomes is focused on the governance topics, it clearly define a strong foundation by documenting the relevant policies, describing identified business risks, metrics, indicators, policies, and compliance processes.

## APPROACH

- Based on five disciplines:
- Security, Risk mitigation
  - Identity Management (IAM)
  - Cost Management
  - Resource Consistency
  - Deployment Automation

## RESULTS

- Governance Processes
- Roles, Responsibilities and Competencies
- RACI matrix
- Exception, Revision, Communication process

Our proposed approach is divided into phases which allows to share intermediate results with your core team.
